1. What is the NQF6 Facilities Management Course?

Facilities management is an interdisciplinary field primarily devoted to the maintenance and care of large commercial or institutional buildings, such as hotels, resorts, schools, universities, office complexes, sports arenas or convention centres, to mention just a few.

Facilities management encompasses multi-disciplinary activities within the built environment and the management of their impact upon people and the workplace.

Effective facilities management, combining resources and activities, is vital to the success of any organization.

At a corporate level, it contributes to the delivery of strategic and operational objectives. On a day-to-day level, effective facilities management provides a safe and efficient working environment, which is essential to the performance of any business – whatever its size and scope.

Facilities Management is the integration of processes within an organization to maintain and develop the agreed services which support and improve the effectiveness of its primary activities.
